Experiment No. 6: Singly Linked List Operations

Aim: Implementation of Singly Linked List

Objective:

It is used to implement stacks and queues which are like fundamental needs throughout computer science. To prevent the collision between the data in the hash map, we use a singly linked list.

Theory:

A linked list is an ordered collection of elements, known as nodes. Each node has two fields: one for data (information) and another to store the address of the next element in the list. The address field of the last node is null, indicating the end of the list. Unlike arrays, linked list elements are not stored in contiguous memory locations; instead, they are connected by explicit links, allowing for dynamic and non-contiguous memory allocation.

The structure of linked list is as shown below

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

Header is a node containing null in its information field and an next address field contains the address of the first data node in the list. Various operations can be performed on singly linked lists like insertion at front, end, after a given node, before a given node deletion at front, at end and after a given node.

Algorithm

Algorithm to insert a new node at the beginning

Step 1: IF AVAIL = NULL

Write OVERFLOW

Go to Step 7 [END OF IF]

Step 2: SET NEW_NODE = AVAIL

Step 3: SET AVAIL = AVAIL NEXT

Step 4: SET DATA = VAL

Step 5: SET NEW_NODE -->NEXT = START

Step 6: SET START = NEW_NODE

Step 7: EXIT

Algorithm to insert a new node at the end

Step 1: IF AVAIL = NULL

Write OVERFLOW

Go to Step 1 [END OF IF]

Step 2: SET = AVAIL

Step 3: SET AVAIL = AVAIL NEXT

Step 4: SET DATA = VAL

Step 5: SET NEW_NODE = NULL

Step 6: SET PTR = START

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

Step 7: Repeat Step 8 while PTR NEXT != NULL

Step 8: SET PTR = PTR NEXT [END OF LOOP]

Step 9: SET PTR--> NEXT = New_Node

Step 10: EXIT

Algorithm to insert a new node after a node that has value NUM

Step 1: IF AVAIL = NULL

Write OVERFLOW

Go to Step 12 [END OF IF]

Step 2: SET = AVAIL

Step 3: SET AVAIL = AVAIL-->NEXT

Step 4: SET DATA = VAL

Step 5: SET PTR = START

Step 6: SET PREPTR = PTR

Step 7: Repeat Steps 8 and 9 while != NUM

Step 8: SET PREPTR = PTR

Step 9: SET PTR = PTR -->NEXT

[END OF LOOP]

Step 10 : PREPTR--> NEXT = NEW_NODE

Step 11: SET NEW_NODE NEXT = PTR

Step 12: EXIT

Algorithm to insert a new node before a node that has value NUM

Step 1: IF AVAIL = NULL

Write OVERFLOW

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

Go to Step 12 [END OF IF]

Step 2: SET = AVAIL

Step 3: SET AVAIL = AVAIL-->NEXT

Step 4: SET DATA = VAL

Step 5: SET PTR = START

Step 6: SET PREPTR = PTR

Step 7: Repeat Steps 8 and 9 while PTR DATA != NUM

Step 8: SET PREPTR = PTR

Step 9: SET PTR = PTR -->NEXT

[END OF LOOP]

Step 10: PREPTR-->NEXT = NEW_NODE

Step 11: SET NEXT = PTR

Step 12: EXIT

Algorithm to delete the first node

Step 1: IF START = NULL

Write UNDERFLOW

Go to Step 5 [END OF IF]

Step 2: SET PTR = START

Step 3: SET START = START -->NEXT

Step 4: FREE PTR

Step 5: EXIT

Algorithm to delete the last node

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

Step 1: IF START = NULL

Write UNDERFLOW

Go to Step 8 [END OF IF]

Step 2: SET PTR = START

Step 3: Repeat Steps 4 and 5 while PTR NEXT != NULL

Step 4: SET PREPTR = PTR

Step 5: SET PTR = PTR --> NEXT [END OF LOOP]

Step 6: SET PREPTR-->NEXT = NULL

Step 7: FREE PTR

Step 8: EXIT

Algorithm to delete the node after a given node

Step 1: IF START = NULL

Write UNDERFLOW

Go to Step 1 [END OF IF]

Step 2: SET PTR = START

Step 3: SET PREPTR = PTR

Step 4: Repeat Steps 5 and 6 while PREPTR DATA != NUM

Step 5: SET PREPTR = PTR

Step 6: SET PTR = PTR--> NEXT

[END OF LOOP]

Step 7: SET TEMP = PTR

Step 8: SET PREPTR --> NEXT = PTR--> NEXT

Step 9: FREE TEMP

Step 10: EXIT

Conclusion:

1) Write an example of stack and queue implementation using singly linked list?

- Here's an example of implementing a stack and a queue using singly linked lists in C:

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

```
``c
```

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
// Define the structure for a single node in the linked list
```

```
struct Node {
```

```
    int data;
```

```
    struct Node* next;
```

```
};
```

```
// Stack implementation using a singly linked list
```

```
struct Stack {
```

```
    struct Node* top;
```

```
};
```

```
// Initialize an empty stack
```

```
void initializeStack(struct Stack* stack) {
```

```
    stack->top = NULL;
```

```
}
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

// Check if the stack is empty

```
int isEmpty(struct Stack* stack) {  
  
    return (stack->top == NULL);  
  
}
```

// Push an element onto the stack

```
void push(struct Stack* stack, int data) {  
  
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));  
  
    newNode->data = data;  
  
    newNode->next = stack->top;  
  
    stack->top = newNode;  
  
}
```

// Pop an element from the stack

```
int pop(struct Stack* stack) {  
  
    if (isEmpty(stack)) {  
  
        printf("Stack is empty.\n");  
  
        return -1;  
  
    }  
  
    struct Node* temp = stack->top;
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

```
int data = temp->data;
```

```
stack->top = temp->next;
```

```
free(temp);
```

```
return data;
```

```
}
```

```
// Queue implementation using a singly linked list
```

```
struct Queue {
```

```
    struct Node* front;
```

```
    struct Node* rear;
```

```
};
```

```
// Initialize an empty queue
```

```
void initializeQueue(struct Queue* queue) {
```

```
    queue->front = queue->rear = NULL;
```

```
}
```

```
// Check if the queue is empty
```

```
int isQueueEmpty(struct Queue* queue) {
```

```
    return (queue->front == NULL);
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

```
}
```

```
// Enqueue an element into the queue
```

```
void enqueue(struct Queue* queue, int data) {  
  
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));  
  
    newNode->data = data;  
  
    newNode->next = NULL;  
  
    if (queue->rear == NULL) {  
  
        queue->front = queue->rear = newNode;  
  
        return;  
  
    }  
  
    queue->rear->next = newNode;  
  
    queue->rear = newNode;  
  
}
```

```
// Dequeue an element from the queue
```

```
int dequeue(struct Queue* queue) {  
  
    if (isEmpty(queue)) {  
  
        printf("Queue is empty.\n");  
  
        return -1;  
  
    }  
  
}
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

```
}  
  
struct Node* temp = queue->front;  
  
int data = temp->data;  
  
queue->front = temp->next;  
  
free(temp);  
  
if (queue->front == NULL) {  
    queue->rear = NULL;  
}  
  
return data;  
}
```

```
int main() {  
    // Stack example  
  
    struct Stack stack;  
  
    initializeStack(&stack);  
  
    push(&stack, 1);  
  
    push(&stack, 2);  
  
    push(&stack, 3);  
  
    while (!isStackEmpty(&stack)) {
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

```
printf("Popped from stack: %d\n", pop(&stack));

}

// Queue example

struct Queue queue;

initializeQueue(&queue);

enqueue(&queue, 1);

enqueue(&queue, 2);

enqueue(&queue, 3);

while (!isQueueEmpty(&queue)) {

    printf("Dequeued from queue: %d\n", dequeue(&queue));

}

return 0;

}
```

...

In this C program, we define a `Node` structure to represent elements in the linked list, and then we implement a stack and a queue using singly linked lists. The provided `main` function demonstrates how to use these data structures.
